All, please note that I have added quite a few locations (20 I think). As I looked at the map I noted that the central property in the ETD and the properties in the NTF were not covered.

I am not certain that all of these can be completed, even if they are only 2ft deep. It is important the we start in the ETF and move west. Either the next location being the NTF or the process areas.

Pat, let me know how difficult it will be to incorporate some or all of these locations. OR if either of you think some of these can be removed and still get all of the properties then let's do that.

Subject: Proposed Soil Boring and Monitoring well map

Hi Katrina - attached is a soil sampling and monitor well location map. I intend to add the two sediment/surface water locations south of WPA. We will also prepare two separate residential grid maps as well. Please review and let me know if you have any comments. I will incorporate your comments in a final field map.

Thank you
Pat
